This material may not be distributed without permission of the author.

The purpose of this document is to show you what you can expect should you choose to invest in this issue of the 0-hr Armada Codex. This issue presents the Trinity-class integrated carrier, which consists of a pair of cruiser "Tines" that can dock or separate from the primary (or "Prime") hull.

The product consists of a main book, map pages book, and uncut map images. Specifically, this is what is shown in this brief demo document:

- **Page 2 (upper right): Main Book.** An overview of the ships, components, and statistics is provided. The stats are generic descriptions and not from any particular game system. Each area of each vessel is enumerated and described. Rendered images are included throughout.

- **Page 2 (left): Map Book.** The map book provides tactical maps (1 inch = 5 ft.) for the interior areas of the ships. The pages are designed to be printed out and laid edge to edge. Layers are used so that certain map elements (like the grid, cargo, or the black and white version of the map) may be toggled on and off as desired.

- **Page 2 (lower right): Uncut Maps.** Complete deckplans are presented in a single giant image, layered so that the grid, black and white version, and so on can be toggled on or off. It includes a light background good for printing, and a dark background good for display on a computer or with a projector. Single layer jpeg images are also included for easier VTT use.

- **Page 3:** These is a sample pages from the map book showing the Command & Control Center. The layers are live in this demo document.

- **Page 4:** Displayed here is a sample of some rendered art from the main book.

- **Page 5:** This is a copy of the product overview from the sales web page.

Thank you for taking the time to explore this product line. I hope that these ships can find a place in your fleet!

0-hr Armada Codex

Trinity

Trinity is an integrated carrier that consists of a large primary hull and a pair of medium-sized cruisers that can operate independently or dock with the primary hull for extended range, increased power, and enhanced FTL capabilities.

The two cruisers are referred to as Trinity Alpha and Trinity Omega, or as “Tines” because the combined ship is vaguely trident shaped. Each cruiser can carry a crew of 70 plus half a dozen fighters and a trio of armored personnel carriers. The forward half of the primary hull (aka Trinity Prime) is nearly identical to the Tines and shares the same deckplans. The back end, however, has expanded facilities and extended systems with long-range missions in mind.

Each section of the ship also carries a large number of multi-purpose drop pods. These can be used as lifeboats, for breaching enemy vessels, or for landing troops on the surface of a planet. All told, Trinity combined boasts a crew of 218 to 314 plus 18 fighters, 9 APCs, and 93 combat-capable drop pods. These ships are meant for solo duties on the edge of, and beyond, civilized space. Though quite capable of fighting, that is not their primary purpose. They are well equipped for diplomatic, exploration, and scientific missions as well.

The Trinity package contains three highly detailed, layered PDF files:

- Main Book
  - 37 page PDF file detailing the interior areas of the ships.
  - Contains 3D rendered scenes as well as orthographic views.
  - Includes system independent statistics designed for easy adaptation to your game of choice.
  - Background, art, and text are on different layers for custom display and printing.

- Map Pages
  - 61 page PDF file containing complete interior maps and instructions for assembly.
  - Miniature-scale maps for tactical combat with an optional 1 inch = 5 ft grid.
  - Divided into pages for easy printing in full color or printer-friendly black and white.
  - Selectable layers include: grid, black & white version, and optional cargo.

- Uncut Map Images
  - Two PDF files containing large, uncut images of the deckplans for the ships.
  - Includes a 26x80 inch image of the cruiser Tines
    and a 49x37 inch image of the additional Prime areas.
  - Select either a light or dark background (for printing or projection/display).
  - Includes layers for grid, black & white version, optional cargo, and background choice.
  - Flat jpeg images, grid-aligned, on a dark background are also provided for use on screen.

Sample document and art, as well as poster maps and matching miniatures, are available at **0-hr.com**.

Thank you for looking over Trinity. I hope that these ships can be of service to you!
