The purpose of this document is to show you what you can expect should you choose to invest in this issue of the 0-hr Armada Codex. Specifically, this is what is shown:

- **Page 2 (right): Main Book.** An overview of the ship, components, and statistics is provided. The stats are generic descriptions and not from any particular game system. Each area of each vessel is enumerated and described. Rendered images are included throughout.
- **Page 2 (center): Map Book.** The map book provides tactical maps (1 inch = 5 ft.) for the interior areas of the ship. The pages are designed to be printed out and laid edge to edge. Layers are used so that certain map elements (like the grid, cargo, or the black and white version of the map) may be toggled on and off as desired.
- **Page 2 (left): Uncut Maps.** Complete deckplans are presented in a single giant image, layered so that the grid, black and white version, and so on can be toggled on or off. It includes a light background good for printing, and a dark background good for display on a computer or with a projector.
- **Page 3:** This is a sample page from the map book. The layers are live in this demo document.
- **Page 4:** Displayed here is a sample of some rendered art from the main book.
- **Page 5:** This is a copy of the product overview from the sales web page.

Thank you for taking the time to explore this product line. I hope that these ships can find a place in your fleet!

Cavalo

The Cavalo-class of cargo shuttles were designed by TriWorld Transport (a division of Trinity Exocorp) under military contract to carry industry standard cargo containers. Depending on the type of container slotted, a Cavalo can serve as a simple freight hauler, passenger carrier, prisoner transport, or weapons platform. Additional containers have been developed to serve as everything from office space, to medical facilities, to living quarters. There is no end to the variety of roles these shuttles could potentially fulfill.

The lightly-armed Cavalo (Portuguese for “horse”) comes in three varieties: a small version that carries a single HMT-225 container, and two larger variants that haul either one or two of the big HMT-337 containers. The variants are designated the CV225, the CV337, and the CV337-D (for “doublewide”). This product presents the three varieties of shuttle, plus several container layouts in both sizes.

The Cavalo’s have powerful VTOL engines and gravitics to support hovering and precise maneuvering. A built in grapple and winch system can be used to retrieve, move, or deploy containers. Dedicated couplings are designed to secure the pod in place, supply external power, and allow easy access between the container and the shuttle cabin during flight.

The Cavalo package contains three highly detailed, layered PDF files:

- Main Book
 - o 24 page PDF file detailing the interior areas of the shuttles and containers.
 - o Contains 3D rendered scenes as well as orthographic views of the ships.
 - o Includes system independent statistics designed for easy adaptation to your game of choice.
 - o Background, art, and text are on different layers for custom display and printing.
- Map Pages
 - o 17 page PDF file containing complete interior maps and instructions for assembly.
 - o Miniature-scale maps for tactical combat with an optional 1 inch = 5 ft grid.
 - o Divided into pages for easy printing in full color or printer-friendly black and white.
 - o Selectable layers include: grid, black & white version, and optional cargo.
- Uncut Map Images
 - o A trio of PDF files containing uncut images of the deckplans for the three shuttles.
 - o Select either a light or dark background (for printing or projection/display).
 - o Includes layers for grid, black & white version, optional cargo, and background choice.

These shuttles provide living space for multiple crew members on long-duration flights. Because it can easily exchange the container(s) being carried to best fit the job at hand, this versatile craft is quickly becoming a favorite in both military and civilian settings. The Cavalo will prove to be a useful addition to any fleet.
